Drain pumps

WE CONTROL THE FLOW

Drain pumps

Designed with competence and tailor made according to your requirements, the discharge pumps are used to maintain the movement of the liquid flow in a reliable way.

Thanks to all the special characteristics of the design and of the construction materials, these pumps are marked as a valid product for various types of uses, even if it's water with a chemically contaminated process or if it's polluted waste water.

The pumps are durable and designed to satisfy the needs of specific applications. It is produced with suitable materials for hydraulic system and with an appropriate sealing system.

They are covered with different certifications and approvals.

OPERATIONS

- Recirculation of the liquids
- Dischagement of the liquids

SPECIAL VERSIONS

On request and for sufficient quantities, Milano Componenti also develops special versions to the client's design.
